In summer 2013, Cascade Natural Gas and its contractors, with the EPA's oversight, collected samples on the beach north of the old Bremerton Gasworks. Results from that sampling effort are available in the Final Removal Evaluation Report. The key finding was areas of solid tar and oil containing polyaromatic hydrocarbons on the beach.

In fall 2013, Cascade Natural Gas removed the solid tar and capped the oily area on the beach with a clay mat covered with a foot of imported beach material. You can find details about the cleanup in the Final Time-Critical Removal Action Report.
